ABOUT

- Computer engineering student with a strong foundation in data structures and experience in .NET technologies, as well as HTML, CSS, JS, and freelance web development. Actively working on .NET projects and sharing them on GitHub. Eager to learn and continuously explore new technologies, aiming to build a career as a .NET developer.

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER INTERN

Papilon Savunma | August 2024 - September 2024

- I developed a custom admin panel application using .NET MVC. Along with implementing all CRUD operations and advanced filtering features, I gained valuable experience in embedding dynamic templates, handling user authentication processes, and managing the entire admin system efficiently.

SOFTWARE ENGINEER INTERN

Celadon | December 2023 - January 2024

- During my remote internship, I aimed to work with an English-speaking team. I developed a tic-tac-toe game with custom logic using React and integrated Firebase for phone number authentication and a leaderboard.

SOFTWARE ENGINEER INTERN

Ones Technology | August 2023 - September 2023

- During my internship, I gained experience in full-stack development by building a frontend for the API I developed using .NET and Entity Framework. I also became familiar with tools like Postman, Docker, and practiced debugging and deployment techniques.

VOLUNTEERS

CORE TEAM MEMBER

Google Developer Student Clubs | January 2021 - January 2023

- As the core team, we have organized numerous events attended by hundreds of students. Through the events we have conducted, we have built a substantial network, and thanks to the training sessions, we have had the opportunity to meet a multitude of people.

PROJECTS

GENGEC MIMARLIK

- This project is a freelance job that has been developed as a full-stack application. Technologies such as .NET MVC, SQL Server, Entity Framework, and Identity were used. gengecmimarlik.com

SIGNALR QR ORDER

- The project I am currently developing, which features a restaurant order management system using ASP.NET Core 6.0, SignalR, API, and N-Tier Architecture, provides real-time capabilities through its admin and storefront panels.
